**Fundamental Food Safety Information**

**Handwashing Facilities**

Adequate handwashing facilities must be available for use. At the food stall there **must** be:

- A supply of running potable water
  - Eg plastic water containers with twist-turn tags (preferred)
- Wastewater collection bucket
  - Used to collect handwashing wastewater. Ensure this wastewater is suitably disposed of
- Liquid soap, paper towel & waste bin/container for used paper towels

*Example of an ideal handwashing facility*

**Protection of Food from Contamination – Avoiding Cross-Contamination!**

- Ensure food that is not pre-packaged is stored and sealed in food grade containers, and covered, at all times.
- Ensure there is adequate separation of raw meat and ready to eat (RTE) food, such as storing raw meat below and away from RTE food such as pre-prepared salads, cooked meat, cooked rice and cooked pasta
- Ensure that when raw meat and RTE food is processed, separate chopping boards and utensils are used. If the same equipment and utensils are used for the processing of these foods, these items must be washed with hot water and detergent and sanitised with a food grader sanitiser immediately before using them for RTE food

**Temperature Control**

- All potentially hazardous food must be stored and displayed at 5°C or below for cold food, or 60°C or above for hot food. If portable refrigeration is unavailable, such as a refrigerated cabinet, ensure esky's with ice blocks are used to store cold food. When using bain-maries or pie warmers, they must be capable of keeping food hot at 60°C or above

**Thermometer**

- If temperature control is necessary, a thermometer, accurate to +/- 1°C must be in good working order and available for use at all times. Ensure temperature checks of PHF are regularly conducted.

**Food on display**

- All unpackaged food that is displayed for sale must be covered & protected from contamination at all times.

**Cooling & Reheating**

- When cooling cooked food, ensure cooked food is cooled in small shallow containers instead of one large pot.
- When reheating food that has been cooked and cooled, ensure this food is rapidly reheated to at least 75°C, preferably in the microwave or the stove. Regular stirring will aid both the cooling and reheating processes

**DECLARATION**

I, \_\_\_\_\_ will take all practical measures to ensure food sold during the permit period is safe and suitable for human consumption; and I understand my obligations under the Food Act 2001 and the Food Safety Standards.

I have read and fully understand the Fundamental Food Safety information above.
